

**IN THE CLAIMS:**

Please amend claims 1, 3-4, 6-7 and 10, and add new claims 11-13 as follows:

1. (Currently Amended) A process for producing a display having a second substrate with a phosphor layer formed on a surface thereof, and a first substrate disposed opposing to said second substrate and having electron guns formed thereon, said electron guns having a structure of: a first conductive film laminated on the first substrate – an insulating film – a second conductive film, said process comprising: forming the insulating film into a tunneling insulator of said electron guns by anodizing said first conductive film formed as an electrode of said electron guns with ~~by using~~ a non-aqueous electrolyte containing an organic solvent having an alcoholic hydroxyl group and at least one solute selected from salts of organic carboxylic acids containing not more than 2 alcoholic hydroxyl groups, wherein the electrolyte contains water at 3-15% by weight.
2. (Original) A process according to claim 1, wherein the organic solvent having the alcoholic hydroxyl group is ethylene glycol or propylene glycol.
3. (Currently Amended) A process according to claim 1, wherein ~~said inorganic oxo-acid is one or more compounds selected from a group consisting of boric acid, phosphoric acid, sulfuric acid, tungstic acid, molybdic acid, chromic acid and vanadic acid, and~~ said organic carboxylic acid is one or more compounds selected from a group consisting of salicylic acid, adipic acid, azelaic acid, phthalic acid, benzoic acid, γ-resorcylic acid, maleic acid, fumaric acid, itaconic acid, malonic acid, succinic acid, glutaric acid, dimethylmalonic acid and citraconic acid.
4. (Currently Amended) A process for producing a display having a second substrate with a phosphor layer formed on a surface thereof, and a first substrate disposed opposing to said second substrate and having electron guns formed thereon, said electron guns having a structure of: a first conductive film laminated on the first substrate – an insulating film – a second conductive film, said process comprising: forming the insulating film into a tunneling insulator of said electron guns by anodizing said first conductive film formed as an electrode of said electron guns with ~~by using~~ a non-aqueous electrolyte containing an aprotic organic solvent and at least

one solute selected from salts of organic carboxylic acids, wherein the electrolyte contains water at 3-15% by weight.

5. (Original) A process according to claim 4, wherein the aprotic organic solvent is  $\gamma$ -butyrolactone or propylene carbonate.
6. (Currently Amended) A process according to claim 4, wherein ~~said inorganic oxo acid is one or more compounds selected from a group consisting of boric acid, phosphoric acid, sulfuric acid, tungstic acid, molybdic acid, chromic acid and vanadic acid, and~~ said organic carboxylic acid is one or more compounds selected from a group consisting of salicylic acid, adipic acid, azelaic acid, phthalic acid, benzoic acid,  $\gamma$ -resorcylic acid, maleic acid, fumaric acid, itaconic acid, malonic acid, succinic acid, glutaric acid, dimethylmalonic acid and citraconic acid.
7. (Currently Amended) A process for producing a display having a second substrate with a phosphor layer formed on a surface thereof, and a first substrate disposed opposing to said second substrate and having electron guns formed thereon, said electron guns having a structure of: a first conductive film laminated on the first substrate – an insulating film – a second conductive film, said process comprising: forming the insulating film into a tunneling insulator of said electron guns by anodizing said first conductive film formed as an electrode of said electron guns with ~~by using~~ a non-aqueous electrolyte containing a mixed solvent comprising an organic solvent having an alcoholic hydroxyl group and an aprotic organic solvent and at least one solute selected from salts of organic carboxylic acids, wherein the electrolyte contains water at 3-15% by weight.
8. (Original) A process according to claim 7, wherein the organic solvent having an alcoholic hydroxyl group is ethylene glycol or propylene glycol.
9. (Original) A process according to claim 7, wherein said aprotic organic solvent is  $\gamma$ -butyrolactone or propylene carbonate.
10. (Currently Amended) A process according to claim 7, wherein ~~said inorganic oxo acids is one or more compounds selected from a group consisting of boric acid,~~

~~phosphoric acid, sulfuric acid, tungstic acid, molybdic acid, chromic acid and vanadic acid,~~ and said organic carboxylic acid is one or more compounds selected from a group consisting of salicylic acid, adipic acid, azelaic acid, phthalic acid, benzoic acid,  $\gamma$ -resorcylic acid, maleic acid, fumaric acid, itaconic acid, malonic acid, succinic acid, glutaric acid, dimethylmalonic acid and citraconic acid.

11. (New) A process according to claim 1, wherein said first conductive film is anodized at a current density of  $1\ \mu$  to  $1\ \text{mA}/\text{cm}^2$  and a formation voltage of 0.1 to 20 V.
12. (New) A process according to claim 4, wherein said first conductive film is anodized at a current density of  $1\ \mu$  to  $1\ \text{mA}/\text{cm}^2$  and a formation voltage of 0.1 to 20 V.
13. (New) A process according to claim 7, wherein said first conductive film is anodized at a current density of  $1\ \mu$  to  $1\ \text{mA}/\text{cm}^2$  and a formation voltage of 0.1 to 20 V.
